

A Fully Integrated Audio and Video Management Solution

VideoBoss is the first fully integrated multi channel audio/video machine designed for business. The system plays video tracks, audio tracks, slideshows and images with full mixing between the tracks. VideoBoss can play up to six video channels combined with audio, or up to 24 stereo audio channels, from a single PC.

Although VideoBoss handles complex tasks, it is very user-friendly. Play lists can consist of video and audio tracks with mixing between the songs; however, when using an audio track only, slideshows, videos, visualization or images can also be displayed. When a video track is displayed, full synchronization occurs between the video and the audio, and when followed by an audio track, mixing between the songs and the video is seamless.

How Can VideoBoss Help My Hotel Property, Auto Dealership, or Restaurant?

- *Generate additional revenue for your business by providing suppliers access to your custom message management system and network of video to advertise products and services to your customers.*
- *Gain a competitive advantage by offering this unique messaging capability through out the entire facility.*
- *Create a unique atmosphere in key parts of your facility such as the lobby, registration, waiting areas, parts department, finance, parking, bar area, corporate meeting rooms or back of the house employee areas.*
- *Enhance your customers experience by providing instructional, information based, or customized messages using audio and video for each group utilizing your facility*
